

# Extended results for ‘Regression Analysis of Macroeconomic Conditions and Capital Structures of Publicly Listed British Firms’

**Keywords:** capital structure, macroeconomic conditions, firm-specific, pecking order theory, trade-off theory, market timing theory

This document contains the full set of results complementing the work published in the main article. To facilitate the comprehension of the tables included in this manuscript, a brief definition of the employed variables is reported in table 1. However, the main article should be considered for further details.

| Variable                 | Proxy                                                     | Symbol     |
|--------------------------|-----------------------------------------------------------|------------|
| Leverage                 | Book Leverage                                             | Lev        |
| Business Cycle           | Industrial Production Growth                              | IPGrate    |
|                          | Corporate Tax Growth Rate                                 | TAXGrate   |
| Financial risk premium   | Risk Premium = prime – Treasury <sup>USA</sup>            | RiskP      |
|                          | Commercial Paper Spread = LIBOR – Treasury <sup>USA</sup> | ComPaperSp |
| Credit Supply            | M3 Growth Rate = $\log M3 - \log M3$                      | M3Grate    |
| Stock Market Performance | FTSE100 Return = $\ln P_t - \ln P_{t-1}$                  | FTSE100Re  |
| Tangibility              | Tangible assets divided by total assets                   | Tang       |
| Profitability            | Earnings (pre-interests & taxes) over the total assets    | Prof       |
| Firm Size                | logarithm of total assets: $FSize = \ln(TA)$              | FSize      |
| Growth Opportunity       | Growth rate of net sales                                  | Growthopp  |
| Current Ratio            | Current assets divided by current liabilities             | CRatio     |

Table 1: Variables Definition

The results of Static (i.e. FEM, REM, Tobit, GLS) and Dynamic (i.e. SGMM and DGMM) estimation strategies using model specification 1, are organised as follows:

- Table 2 numerically show the Impact of Macroeconomic Variables on Leverage (including Commercial Paper Spread and Corporate Tax Growth Rate);
- Table 3 numerically show the Impact of Macroeconomic Variables on Leverage, (including Commercial Paper Spread and Industrial Production Growth Rate).
- Table 4 numerically show the Impact of Macroeconomic Variables on Leverage, (including Risk Premium and Corporate Tax Growth Rate).
- Table 5 numerically shows the Impact of Macroeconomic Variables on Leverage, (including Risk Premium and Industrial Production Growth Rate).

- Table 6 reports the Summary of Dynamic and Static models' Results Signs vs. Capital Structure Theories and the Research Hypotheses.
- Table 7. GLS Estimation method using models 1-6 and ComPaperSp and TAXGrate
- Table 8 shows the results of the GLS Estimation method using models 1-6 and ComPaperSp and IPGrate
- Table 9 shows the results of the GLS Estimation method using models 1-6 and RiskP and TAXGrate
- Table 10. GLS Estimation method using models 1-6 and RiskP and IPGrate
- Table 11 shows the results of the SGMM and DGMM Estimation strategies using models 1 & 2 and ComPaperSp and TAXGrate
- Table 12 shows the results of the SGMM and DGMM Estimation strategies using models 1 & 2 and ComPaperSp and IPGrate
- Table 13 shows the results of the SGMM and DGMM Estimation strategies using models 1 & 2 and RiskP and TAXGrate
- Table 14 shows the results of the SGMM and DGMM Estimation strategies using models 1 & 2 and RiskP and IPGrate
- Table 15 shows the results of the SGMM and DGMM Estimation strategies using models 1 & 2 and ComPaperSp and TAXGrate (considering lag of M3Grate and lag of FTSE100Re)
- Table 16 shows the results of the SGMM and DGMM Estimation strategies using models 1 & 2 and ComPaperSp and IPGrate (considering lag of M3Grateand lag of FTSE100Re)
- Table 17 shows the results of the SGMM and DGMM Estimation strategies using models 1 & 2 and RiskP and TAXGrate (considering lag of M3Grate and lag of FTSE100Re)
- Table 18 shows the results of the SGMM and DGMM Estimation strategies using models 1 & 2 and RiskP and IPGrate (considering lag of M3Grateand lag of FTSE100Re)

| Variable                 | FEM                            | REM                            | Tobit                          | GLS                            | SGMM                          | DGMM                          |
